

METAL ROOFING EXPOSED FASTENER

Exposed fastener roofing, also called screw-down metal roofing, is a cost-effective and durable option popular with homeowners. Panels are secured directly to the roof deck with fasteners that remain visible, creating a traditional look that has been trusted for decades.

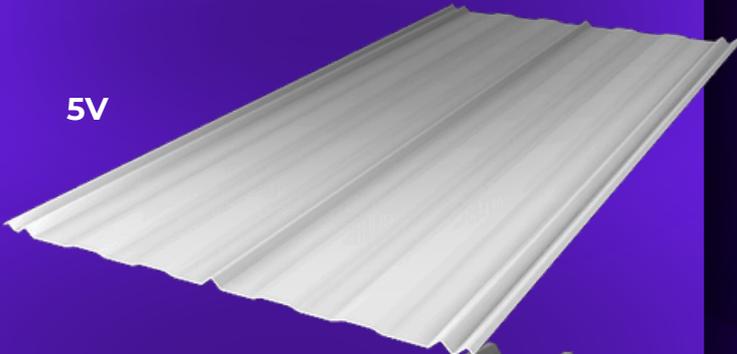

Available in a wide variety of profiles and colors, exposed fastener panels can be used for full roof systems or accent applications. They are designed to withstand harsh weather while offering excellent fire resistance, long service life, and outstanding value.
